

AC Axial fans

Technical
Catalogue

Hidria

General data

Labelling

Labelling a fan as ErP2015-compliant indicates that it meets the minimum requirements set out in related Commission Regulation EU No 327/2011. The actual energy efficiency level of the fan used for the ErP rating is noted as η_{stat} A. In order to comply with the requirements contained in the ErP regulation, the fan's energy efficiency level must reach a specific minimum value (target energy level). Efficiency grade N is a parameter used in the calculation of the target energy efficiency as defined in Annex II of Commission Regulation EU No 327/2011. Any and all data pertaining to axial fan ErP classification refer to measurement data established using the Hidria axial fan equipped with a standard full bell mouth without a guard grille. Actual fan performance data including the efficiency level for each and every ErP compliant fan are published on the Hidria website www.hidria.com.

Aerodynamics and Acoustics

Measurement method

The 'characteristic curve' diagram shows the pressure increase Δp in Pa as a function of the volume flow rate qV in m^3/h . The specified performance data meets accuracy class 3 as defined with DIN 24 166 (ISO13348), and applies to the rated data and air performance curves at the rated voltage, an air density of 1.2 kg/m^3 and a 20°C ambient temperature. The continuous line in the characteristic map represents the recommended operating range for axial fans.

Fan test bench

The fan characteristic curves are determined on a combined ventilation and sound reverberation room test bench.

The characteristic curves are measured in compliance with DIN EN ISO 5801. The sound power levels are measured in a reverberation room in compliance with DIN EN ISO 3743. The fan is attached to the measuring chamber with a free (air) intake and (air) outlet (installation type A in compliance with DIN EN ISO 5801). Unless otherwise indicated, this catalogue specifies the intake side A-evaluated sound power levels LWA. The standard measurements are carried out without the need for additional parts, e.g. a guard grille. The A-weighted sound power level is the standard variable used to assess the sound characteristics of technical equipment.

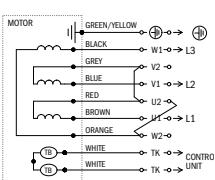

LVD and EMC compliance

The Electromagnetic Compatibility limits set in Directive 2004/108/EC ensure that electrical and electronic equipment does not generate, or is not affected by, electromagnetic disturbance. EMC compliance of the fan arrangement has to be established on the final appliance as different mounting configurations can result in changed EMC properties.

Hidria fans are designed and produced in line with the Low Voltage Directive (LVD) 2006/95/CE, meaning that the health and safety risks when operating these fans in standardised power networks are negligible.

General notes

The information contained in this catalogue was prepared to the best of our ability and does not absolve the user from their duty to verify the suitability of the products with respect to the intended application. Hidria reserves the right to make design changes for the purpose of continuous performance and/or safety improvement.

AC Axial fans - Sickled blades

AC Axial fans

■ Electrical connection and motor

AC Axial fans are driven by single-phase or three-phase AC (Alternating Current) external rotor induction motors. The motors are integrated into the fan hub. The rated voltage for a three-phase power supply is 400 V and for single-phase AC motors it is 230 V. Single-phase or three-phase AC motors are suitable for 400 V $\pm 10\%$ or 230 V $\pm 10\%$, as well as 50/60 Hz. All other voltage types are available as customised solutions.

■ Motor connection

Mains & control connections are made via a terminal box or outgoing connection cable as shown in the dimensional drawings.

■ Terminal box and connection cable

Terminal boxes are made of shock-proof and weather-resistant plastics. Heat- and UV-resistant halogen-free multicore cables are used, marked by a colour code or connection designations as labelled on the terminal block. The cable construction complies with VDE 0282 Part 804 and is suitable for operating voltages of up to 400 V for single-phase products and 690 V for three-phase products.

■ Speed controls

Hidria AC fans are suitable for operation with or without one of the Variable Speed Drive (VSD) units such as a frequency converter, triac controller, soft start or autotransformer. When a VSD is in use, special caution needs to be taken to verify that the temperature rise is in line with the motor insulation class (B or F) limits and that the EMC requirements of the final appliance are met. It is recommended to use a Sine Wave Filter attached between the frequency converter and AC fan in order to assure the best acoustic and lifetime performance of the fan. Please follow the safety, installation and maintenance instructions of the VSD used when applied to Hidria fans.

■ Installation and usage information

For the installation, maintenance and safe use of AC axial fans, please refer to the user manual.

■ Materials and corrosion protection

Hidria AC Axial fan impellers are made of high-performance PA or PP composite material, aluminium or steel. The impeller is pressed onto the rotor. Some axial fans have stamped steel or aluminium blades. Such blades are riveted or screwed onto the rotors of the external rotor motor. The motor housing is made of high-pressure, die-cast aluminium alloy. Additional painting is applied when high-corrosion protection is requested. Protection grids are made of steel and coated to meet resistance to corrosion as set by ISO 12944-2 class C3 (medium). A higher corrosion resistance level is available on request.

■ Operating conditions and product life safety

The fans may only be operated when installed as intended and when safety is ensured by use of safety equipment according to DIN EN 294 resp. ISO13852 (DIN EN ISO 12100) or by other protection measures defined in the user manual.

Safety approvals

Depending on the product, Hidria fans comply with one or more of the following standards: EN 60335-1, EN 61800-5-1 and EN 60034-1. The majority of fans can be supplied in a CE, UL/CSA, CCC, SASO and/or EAC approved design.

Installation orientations

Axial fans are intended to be installed with the rotor in a horizontal position or with the rotor at the bottom of the fan (vertical position with the connection box or cables on the top). The lower condensation drain hole must be open when the fan is installed vertically, that is with the rotor at the bottom. With a horizontal mounting position, condensate can escape via the gap between the stator and rotor. Installation

with the rotor at the top (connection box or cables at the bottom) is only available on request.

Operating mode

Continuous operation (S1)

Resistance to water, dust and moisture

The majority of axial fans are resistant to the presence of water, dust and moisture as defined by class IP44 or IP 54 (IEC 60529, IEC60034, IEC60335).

Ambient conditions

If not instructed differently, the fans can be subjected to the following conditions:

- placed outdoors (rain, snow, UV radiation)
- working ambient temperatures of between -30 °C (-40 °C) and +70 °C
- storage temperatures: -40 °C to +80 °C

Product life

By utilising lifetime-maintenance-free bearings, our axial fans are maintenance-free for the entire lifetime of approximately 30,000–40,000 hours for standard applications and environmental conditions.

Contact protection

The preferred ‘protective construction’ used on axial fans is a guard grid. Depending on the airflow direction, the guard grid is located on the intake or pressure side of the fan. The ‘Accessories’ section contains separate guard grids, which can be positioned on the pressure or intake side of the fan as required and depending on the installation situation, to meet the safety requirements set out in DIN EN ISO 13857 defining safety distance requirements to prevent upper limbs from getting into hazardous areas. Be aware that the use of guard grids results in increased resistance to the conveyed airflow, which manifests in additional pressure loss.

Stamped steel blades (type 18H, 30H)
Diameters: 300-350 mm

Stamped aluminium blades (type 30H)
Diameters: 450-630 mm

Die-cast aluminium blades (type 30H)
Diameters: 630-800 mm

Example of type key:

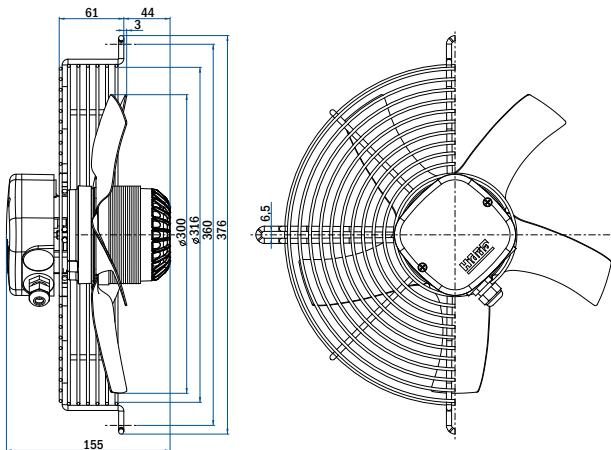

R13R-5630HA-6T2-7008

			R13	External rotor motor type (R09, R13)
			R	Accessory type (E – without guard grill, R – with guard grill, P – with guard grill and wall plate)
			56	Fan diameter x 10 (exact diameters are stated in drawings)
			30H	Type of blades (18H, 30H)
			A	Airflow direction (A – sucking, P – blowing)
			6	Number of motor poles
			T	Number of phases (M – single phase, T – three phase)
			2	Number of motor speed
			70	Motor stack height
			08	Version of electrical construction

R11R-4030A-4T2-3830

				R11 External rotor motor type (R09, R11, R13)
				R Accessory type (E – without guard grill, R – with guard grill, P – with guard grill and wall plate)
				40 Fan diameter x 10 (exact diameters are stated in drawings)
				30 Type of blades (25 °, 30 °, 35 °)
				A Airflow direction (A – sucking, P – blowing)
				4 Number of motor poles
				T Number of phases (M – single phase, T – three phase)
				2 Number of motor speed
				38 Motor stack height
				30 Version of electrical construction

Diameter:**200 mm****R09_-2025_-2M-1511****Fan with guard grill**

Blowing	R09E-2025P-2M-1511	On request	

Nominal data according to standard EN 60335:

Phase	1~
Nominal voltage	230 V
Frequency	50/60 Hz
Rated power input	45/55 W
Rated current	0.21/0.24 A
Rated speed	2580/2850 RPM
Min. ambient temperature	-30 °C
Max. ambient temperature	70 °C
Sound power level A weighted	66/69 dB (A)
Condensator	1.5 µF/450 V
Connection	cable
Insulation class	155
Protection class	IP44

Is not subject to the EU regulation 327/2011.

Power input lower than 125 W.

Aerodynamic characteristic

Fan characteristic measured in full bell mouth with guard grill.

Nominal data according to standard EN 60335:

Phase	1~
Nominal voltage	230 V
Frequency	50/60 Hz
Rated power input	200/265 W
Rated current	0.9/1.15 A
Rated speed	1345/1500 RPM
Min. ambient temperature	-30 °C
Max. ambient temperature	65/45 °C
Sound power level A weighted	72/76 dB (A)
Condensator	6.3 µF/450 V
Connection	terminal box
Insulation class	155
Protection class	IP54

ErP data according to EU regulation 327/2011:

Overall efficiency	32.1 %
Measurement category	A
Efficiency category	static
Efficiency grade N	42.5
Variable speed drive	NO
Power input	228 W
Air flow	3121 m³/h
Pressure drop	88 Pa
Speed	1375 RPM
Specific ratio	1.00

Aerodynamic characteristic

Fan characteristic measured in short bell mouth with guard grill.

ErP characteristic measured in full bell mouth without guard grill.

Nominal data according to standard EN 60335:

Phase	3~
Nominal voltage	400/230 V
Frequency	50/60 Hz
Rated power input	530/820 W
Rated current	1.08/1.90/1.37/2.40 A
Rated speed	1390/1565 RPM
Min. ambient temperature	-30 °C
Max. ambient temperature	70 °C
Sound power level A weighted	79/83 dB (A)
Connection	terminal box
Insulation class	155
Protection class	IP54

ErP data according to EU regulation 327/2011:

Overall efficiency	32.1 %
Measurement category	A
Efficiency category	static
Efficiency grade N	40.2
Variable speed drive	NO
Power input	525 W
Air flow	4952 m³/h
Pressure drop	129 Pa
Speed	1394 RPM
Specific ratio	1.00

Aerodynamic characteristic

Fan characteristic measured in short bell mouth with guard grill.

ErP characteristic measured in full bell mouth without guard grill.

Diameter:

560 mm

Nominal data according to standard EN 60335:

Phase	3~
Nominal voltage	400 V
Frequency	50 Hz
Speed	high/low
Rated power input	305/210 W
Rated current	0.70/0.36 A
Rated speed	920/780 RPM
Min. ambient temperature	-30 °C
Max. ambient temperature	60/60 °C
Sound power level A weighted	72/68 dB (A)
Connection	terminal box
Insulation class	155
Protection class	IP54

ErP data according to EU regulation 327/2011:

Overall efficiency	30.8 %
Measurement category	A
Efficiency category	static
Efficiency grade N	40.0
Variable speed drive	NO
Power input	355 W
Air flow	5219 m³/h
Pressure drop	77 Pa
Speed	908 RPM
Specific ratio	1.00

Aerodynamic characteristic

Fan characteristic measured in short bell mouth with guard grill.
ErP characteristic measured in full bell mouth without guard grill.

Nominal data according to UL standard:

Phase	1~
Nominal voltage	230 V
Frequency	60 Hz
Rated power input	550 W
Rated current	2.25 A
Rated speed	1400 RPM
Min. ambient temperature	-30 °C
Max. ambient temperature	65 °C
Sound power level A weighted	78 dB(A)
Condensator	10 µF/450 V
Connection	terminal box
Insulation class	F
Protection class	IP54
UL file	E250222

Aerodynamic characteristic

Fan characteristic measured in short bell mouth with guard grill.

Fluid flow rules for fans

Speed variation at constant fan size and constant density:

$$\frac{V_1}{V_2} = \frac{n_1}{n_2}$$

The volume flow changes proportionately to the speed.

$$\frac{p_1}{p_2} = \left(\frac{n_1}{n_2}\right)^2 = \left(\frac{V_1}{V_2}\right)^2$$

All pressures (static, dynamic and total) change proportionately to the square of speed or volume flow.

$$\frac{P_1}{P_2} = \left(\frac{n_1}{n_2}\right)^3 = \left(\frac{V_1}{V_2}\right)^3$$

The power requirement changes proportionately to the third power of speed or volume flow.

$$L_{wA_2} = L_{wA_1} + 50 \log\left(\frac{n_2}{n_1}\right)$$

Correlation between sound power level (A weighted) and fan rotation speed.

In the case of changes in the wheel diameter of geometrically similar wheels at constant speed:

$$\frac{V_1}{V_2} = \left(\frac{D_1}{D_2}\right)^3$$

The volume flow changes proportionately to the third power of wheel diameter.

$$\frac{p_1}{p_2} = \left(\frac{D_1}{D_2}\right)^2$$

All pressures (static, dynamic and total) change proportionately to the square of wheel diameter.

$$\frac{P_1}{P_2} = \left(\frac{D_1}{D_2}\right)^5$$

The power requirement changes proportionately to the fifth power of wheel diameter.

Changes in the density at constant speed (or change of the Kelvin temperature at a constant volume flow):

$$V = \text{Const}$$

The volume flow is not affected.

$$\frac{p_1}{p_2} = \frac{\rho_1}{\rho_2} = \frac{T_2}{T_1}$$

All pressures (static, dynamic and total) change proportionately to the density.*

$$\frac{P_1}{P_2} = \frac{\rho_1}{\rho_2} = \frac{T_2}{T_1}$$

The power requirement changes proportionately to the density.*

*Temperature is expressed in kelvin scale [K]

Formulas are of an informative nature.

EC Axial fans

Technical
Catalogue

Hidria

General data

Labelling

Labelling a fan as ErP2015-compliant indicates that it meets the minimum requirements set out in related Commission Regulation EU No 327/2011. The actual energy efficiency level of the fan used for the ErP rating is noted as η_{stat} A. In order to comply with the requirements contained in the ErP regulation, the fan's energy efficiency level must reach a specific minimum value (target energy level). Efficiency grade N is a parameter used in the calculation of the target energy efficiency as defined in Annex II of Commission Regulation EU No 327/2011. Any and all data pertaining to axial fan ErP classification refer to measurement data established using the Hidria axial fan equipped with a standard full bell mouth without a guard grille. Actual fan performance data including the efficiency level for each and every ErP compliant fan are published on the Hidria website www.hidria.com.

Aerodynamics and Acoustics

Measurement method

The 'characteristic curve' diagram shows the pressure increase Δp in Pa as a function of the volume flow rate qV in m^3/h . The specified performance data meets accuracy class 3 as defined with DIN 24 166 (ISO13348), and applies to the rated data and air performance curves at the rated voltage, an air density of 1.2 kg/m^3 and a 20°C ambient temperature. The continuous line in the characteristic map represents the recommended operating range for axial fans.

Fan test bench

The fan characteristic curves are determined on a combined ventilation and sound reverberation room test bench.

The characteristic curves are measured in compliance with DIN EN ISO 5801.

The sound power levels are measured in a reverberation room in compliance with DIN EN ISO 3743. The fan is attached to the measuring chamber with a free (air) intake and (air) outlet (installation type A in compliance with DIN EN ISO 5801). Unless otherwise indicated, this catalogue specifies the intake side A-evaluated sound power levels LWA. The standard measurements are carried out without the need for additional parts, e.g. a guard grille. The A-weighted sound power level is the standard variable used to assess the sound characteristics of technical equipment.

LVD and EMC compliance

The Electromagnetic Compatibility limits set in Directive 2004/108/EC ensure that electrical and electronic equipment does not generate, or is not affected by, electromagnetic disturbance. EMC compliance of the fan arrangement has to be established on the final appliance as different mounting configurations can result in changed EMC properties.

Hidria fans are designed and produced in line with the Low Voltage Directive (LVD) 2006/95/CE, meaning that the health and safety risks when operating these fans in standardised power networks are negligible.

General notes

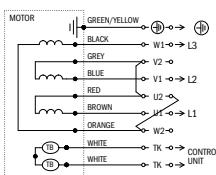

The information contained in this catalogue was prepared to the best of our ability and does not absolve the user from their duty to verify the suitability of the products with respect to the intended application. Hidria reserves the right to make design changes for the purpose of continuous performance and/or safety improvement.

EC Axial fans

EC AXIAL FANS

ACCESSORIES

CONNECTION DIAGRAMS

APPENDIX

EC Axial fans

■ Electrical connection and motor

The three-phase or single-phase EC (Electronically Commutated) external rotor motor integrated into the fan hub meets the requirements for rotating electric machines as defined by the standard EN 60335-2-80:2003. EC motors are suitable for power networks with a single-phase voltage range of 200 to 277 V 50/60 Hz or a three-phase range of 380 to 480 V 50/60 Hz. Other voltages or frequency ranges are available upon customer request. Refer to the data sheet of each fan for the details.

■ Motor connection

Mains & control connections are made via a terminal box or outgoing connection cable as shown in the dimensional drawings. The standard connection scheme of an EC fan has terminals to connect:

- a 1- or 3-phase line,
- N – neutral,
- G – ground,
- analogue input (0–10 V or PWM),
- SELV power supply 10 VDC (max. 30 mA),
- MODBUS RTU – serial communication port, and
- a tach out or error out signal (programmable).

A reference control signal is optional when a built-in PID controller is required.

■ Terminal box and connection cable

Terminal boxes are made of shock-proof and weather-resistant composite material. Heat- and UV-resistant halogen-free multicore cables are used, marked by a colour code or connection designations as labelled on the terminal block. The cable construction complies with VDE 0282 Part 804 and is suitable for operating voltages of up to 400 VAC for single-phase products and 690 VAC for three-phase products.

■ Speed controls

Hidria EC fans are made with an integrated electronic variable speed drive (VSD). Speed variation can be achieved by a speed input signal 0 V to 10 VDC, 4–20 mA, Pulse Width Modulated (PWM) frequency signal or by use of a MODBUS RTU serial

communication port. Please read the EC fan safety, installation and maintenance instructions before any of these speed control schemes are used.

■ Installation and usage information

For the installation, maintenance and safe use of EC axial fans, please refer to the user manual.

■ Materials and corrosion protection

Hidria EC Axial fan impellers are made of high-performance PA or PP composite material or steel. The impeller is pressed onto the rotor. The stator flange and electronic cover are made of high-pressure, die-cast aluminium alloy. Additional painting is applied when high-corrosion protection is requested. Protection grills are made of steel and coated to meet resistance to corrosion according to ISO 12944-2 class C3 (medium). Additional coating is available on request.

■ Operating conditions and product life

Safety

The fans may only be operated when installed as intended and when safety is ensured by use of safety equipment according to DIN EN 294 resp. ISO13852 (DIN EN ISO 12100) or by other protection measures defined in the user manual.

Safety approvals

Depending on the product, Hidria fans comply with one or more of the following standards: EN 60335-1, EN 61800-5-1 and EN 60034-1. All EC fans are supplied with CE marking, UL/ CSA, CCC, SASO and/or EAC approvals on request. All EC fans meet the requirements of EU Directives ROHS 2011/65/EU and REACH 1907/2006/EC.

Installation orientations

EC fans are intended to be installed with the rotor in a horizontal position or with the rotor at the bottom of the fan (vertical position with the connection box or cables on the top). The lower condensation drain hole must be open when the fan is

installed vertically, that is with the rotor at the bottom. With a horizontal mounting position, condensate can escape via the gap between the stator and rotor. Fans suitable for vertical installation with the rotor at the top (connection box or cables at the bottom) or at any other angle are only available on request.

Operating mode

Continuous operation (S1). Use the speed control input signal when On/Off cycling of the EC fan is required. Power supply cycling is only allowed in certain conditions. See the EC fan user manual.

Resistance to water, dust and moisture

The majority of axial fans are resistant to the presence of water, dust and moisture as defined by class IP44, IP54 or even IP55 on request (IEC 60529, IEC60034, IEC60335).

Ambient conditions

If not instructed differently, the fans can be subjected to the following conditions:

- placed outdoors (rain, snow, UV radiation)
- working ambient temperatures of between -25 °C (-40 °C) and +65 °C
- storage temperatures: -40 °C to +80 °C

Product life

By utilising lifetime-maintenance-free bearings, our EC axial fans are maintenance-free for the entire lifetime of approximately 30,000–40,000 hours for standard applications and environmental conditions.

Contact protection

The preferred ‘protective construction’ used on axial fans is a guard grille. Depending on the airflow direction, the guard grille is located on the intake or pressure side of the fan. The ‘Accessories’ section contains separate guard grills which can be positioned on the pressure or intake side of the fan as required and depending on the installation situation, to meet the safety requirements set out in DIN EN ISO 13857 defining safety distance requirements to prevent upper limbs from getting into hazardous areas.

Be aware that the use of guard grills results in increased resistance to the conveyed airflow, which manifests in additional pressure loss.

Input power	165 W
Input current	1.35 A
Nominal speed	2140 RPM
Min. ambient temperature	-25 °C
Protection class	IP54
Insulation class	130

ErP data according to EU regulation 327/2011:

Overall efficiency	48.6 %
Measurement category	A
Efficiency category	static
Efficiency grade N	60
Variable speed drive	INTEGRATED
Power input	160 W
Air flow	1880 m³/h
Pressure drop	133 Pa
Rotational speed	2140 RPM
Specific ratio	1.00

Dimensions and fan ordering information

Airflow direction - sucking

This diagram shows the side profile of the fan. It indicates the air intake at the bottom and the outlet at the top. Dimensions shown include 78, 55, 42, 395, 155, 153, 474, 179, and 9. An arrow points to the left, labeled "Airflow direction - sucking".

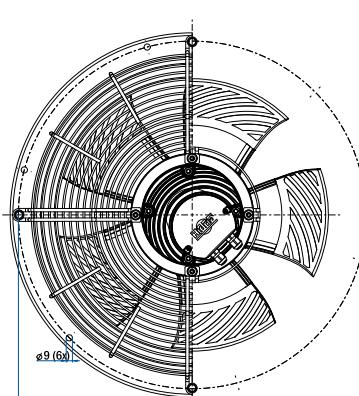

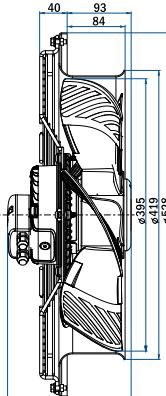

Type: R10R-40APS-ES50B-02A01
Code: 0310-4-0000
Weight: 6.2 kg

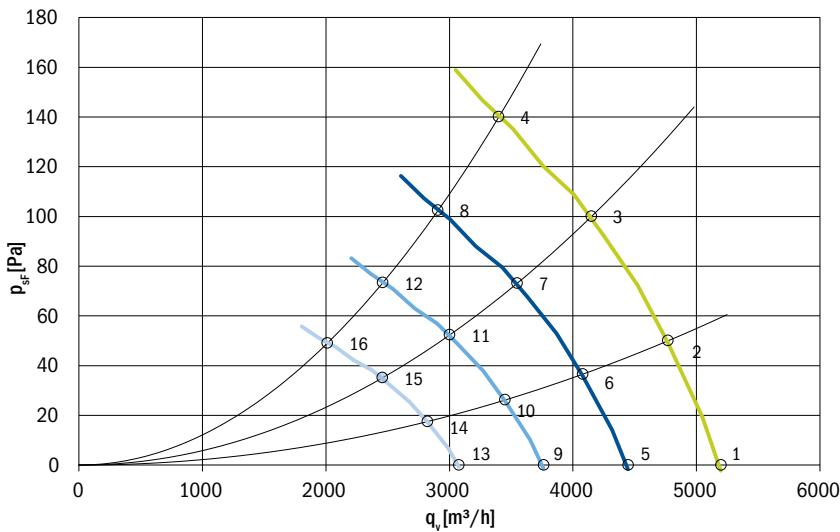

Airflow direction - sucking

This diagram shows the side profile of the fan. It indicates the air intake at the bottom and the outlet at the top. Dimensions shown include 40, 93, 84, 395, 419, 528, and 179. An arrow points to the left, labeled "Airflow direction - sucking".

Type: R10P-40APS-ES50B-02A01
Code: 0310-4-0025
Weight: 7.5 kg

Weight: 11.6 kg

Diameter:**500 mm****R14_-50AP_-ES40B-17A22**

**COMPLIANT TO
ERP 2015**

Nominal data according to standard IEC 60034 (max. load):

Phase	1~
Nominal voltage	230 V
Nominal voltage range	200-277 V
Frequency	50-60 Hz
Input power	650 W
Input current	2.9 A
Nominal speed	1420 RPM
Min. ambient temperature	-25 °C
Protection class	IP54
Insulation class	130

ErP data according to EU regulation 327/2011:

Overall efficiency	46.5 %
Measurement category	A
Efficiency category	static
Efficiency grade N	53.8
Variable speed drive	INTEGRATED
Power input	0.71 kW
Air flow	6056 m³/h
Pressure drop	188 Pa
Rotational speed	1433 RPM
Specific ratio	1.00

Dimensions and fan ordering information

Airflow direction - sucking

Type: R14R-50APS-ES40B-17A22

Code: 0314-4-0039

Weight: 11.0 kg

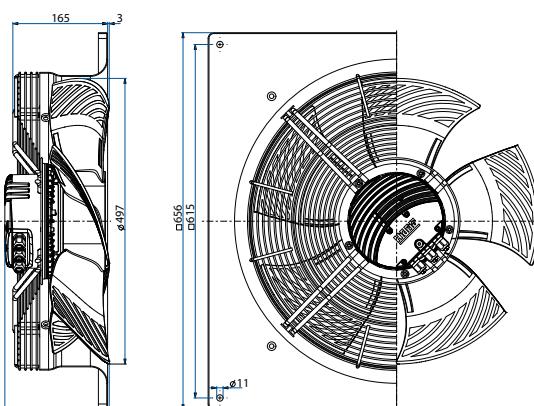

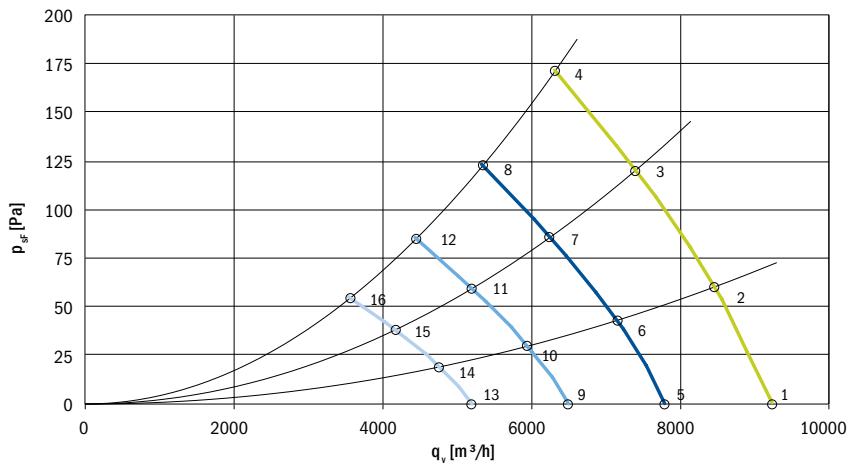

Airflow direction - sucking

Type: R14P-50APS-ES40B-17A22

Code: 0314-4-0040

Weight: 15.7 kg

**Aerodynamic characteristic:**

- measured in full bell mouth without guard grill
- installation category A according to ISO 5801

Sound power level:

- measured on pressure side
- fan mounted in full bell mouth without guard grill
- measured according to ISO 3741; installation type A

The values given may vary according to actual installation in the unit.

Aerodynamic characteristic:

- measured in full bell mouth without guard grill
- installation category A according to ISO 5801

Sound power level:

- measured on pressure side
- fan mounted in full bell mouth without guard grill
- measured according to ISO 3741; installation type A

The values given may vary according to actual installation in the unit.

Definition of symbols

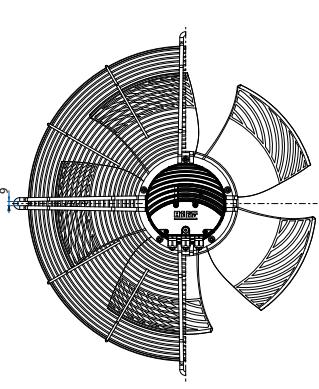

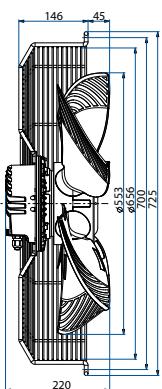

U [V]	Supply voltage

Fluid flow rules for fans

Speed variation at constant fan size and constant density:

$$\frac{V_1}{V_2} = \frac{n_1}{n_2}$$

The volume flow changes proportionately to the speed.

$$\frac{p_1}{p_2} = \left(\frac{n_1}{n_2}\right)^2 = \left(\frac{V_1}{V_2}\right)^2$$

All pressures (static, dynamic and total) change proportionately to the square of speed or volume flow.

$$\frac{P_1}{P_2} = \left(\frac{n_1}{n_2}\right)^3 = \left(\frac{V_1}{V_2}\right)^3$$

The power requirement changes proportionately to the third power of speed or volume flow.

$$L_{wA_2} = L_{wA_1} + 50 \log\left(\frac{n_2}{n_1}\right)$$

Correlation between sound power level (A weighted) and fan rotation speed.

In the case of changes in the wheel diameter of geometrically similar wheels at constant speed:

$$\frac{V_1}{V_2} = \left(\frac{D_1}{D_2}\right)^3$$

The volume flow changes proportionately to the third power of wheel diameter.

$$\frac{p_1}{p_2} = \left(\frac{D_1}{D_2}\right)^2$$

All pressures (static, dynamic and total) change proportionately to the square of wheel diameter.

$$\frac{P_1}{P_2} = \left(\frac{D_1}{D_2}\right)^5$$

The power requirement changes proportionately to the fifth power of wheel diameter.

Changes in the density at constant speed (or change of the Kelvin temperature at a constant volume flow):

$$V = \text{Const}$$

The volume flow is not affected.

$$\frac{p_1}{p_2} = \frac{\rho_1}{\rho_2} = \frac{T_2}{T_1}$$

All pressures (static, dynamic and total) change proportionately to the density.*

$$\frac{P_1}{P_2} = \frac{\rho_1}{\rho_2} = \frac{T_2}{T_1}$$

The power requirement changes proportionately to the density.*

*Temperature is expressed in kelvin scale [K]

Formulas are of an informative nature.
